1. Claims 1-20, 22-54, and 58-67 are allowed.
2. The following is an examiner's statement of reasons for allowance: a current folding cell has current inputs and current outputs. Input currents are transferred from one current path to another and finally to the current outputs to establish a continuous folding characteristic including a current sample-and-hold or track-and-hold circuit, wherein an input current is injected into a terminal of a transistor to convert the input current to a voltage so that this voltage can be stored on a storage capacitor, and where the input current is transferred to another terminal of the transistor from where it is made available for further use, has not been shown in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wang, et al 6,535,156 disclose A method that correlates a course analog to digital converter (ADC) output value against a folded fine ADC transfer curve slope value to determine an ADC circuit region. The folded fine ADC has a greater resolution than the course ADC. A decoder that correlates a course analog to digital converter (ADC) output value against a folded fine ADC transfer curve slope value to determine an ADC circuit region. The folded fine ADC has greater resolution than the course ADC.
